

Online Tracking Guide

A. Register a Tracking account

✚ First login the Tracking system: <http://whereaboutz.net/>

GPS Tracking Server

☒ Account ☐ IMEI

Email

PassWord

Sign In Reset Sign Up

Demo

✚ Click "Sign Up" into the register, and finally click "Apply", we will send you a E-mail which contains account information.

GPS Tracking Server

New User

Customer Name

Email

Device Count

Password

Re-enter Password

Apply Reset Return

Attention: Select "Account" to login with E-mail; "IMEI" login with one single device, and "IMEI" option's password is created when you create your own device.

B. Login the tracking system:

Maybe you will see a alarm window like this:

This is because you haven't any data in the server now.

C. Create your devices

Click “Device Status”, you will see a button of “New Device” below the window.

A screenshot of the 'Device Status' page in a web application. The page has a navigation bar with links: User Profile, Device Status (active), Track Mapping, Reports, Import, and Logout. Below the navigation bar, there are input fields for Nick Name, IMEI Number, and Device Status (a dropdown menu set to 'All'). A 'Search' button is to the right. Below these fields is a table with columns: Device Name, IMEI, Valid Date, Status, Description, Country, Email, and Track Status. The table contains six rows of device data. At the bottom, there are pagination controls: 'first', 'previous', 'next', 'last', 'Total Records: 5', '10 per page', 'Total Pages: 1', 'Jump to 1'. There are also 'New Device' and 'Modify' buttons at the bottom left.

Click this button, and then input information of your new device.

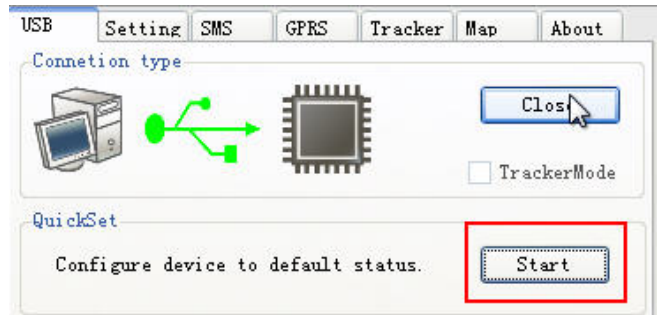

A screenshot of the 'New Device' form in the 'GPS Tracking Server' application. The form is titled 'New Device' and has a navigation bar with links: Profile, Device (active), Track, and Report. The form contains input fields for Nick Name, IMEI Number, Description, Password, Email, and Country. At the bottom, there are three buttons: 'Apply', 'Reset', and 'Return'. The background of the form shows silhouettes of people in a modern office setting.

Attention: This password isn't the password that you login as a user but login with this IMEI number.

After you apply your new device, when the status of your device is changed to “Valid”, you can use this device for tracking.

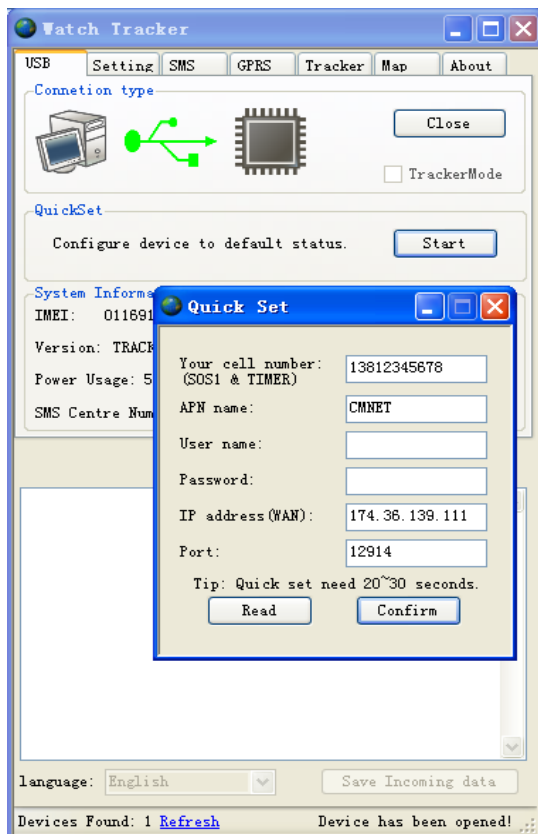

D. Set your tracker

For tracking with GPRS, we need to set right parameters. Connect your tracker and PC with USB cable, then open it; when the USB sign change to green, click the “Start” button in QuickSet function:

Then input parameters in it. If some parameters that you don't want to change, just let it be blank.

This is an example:

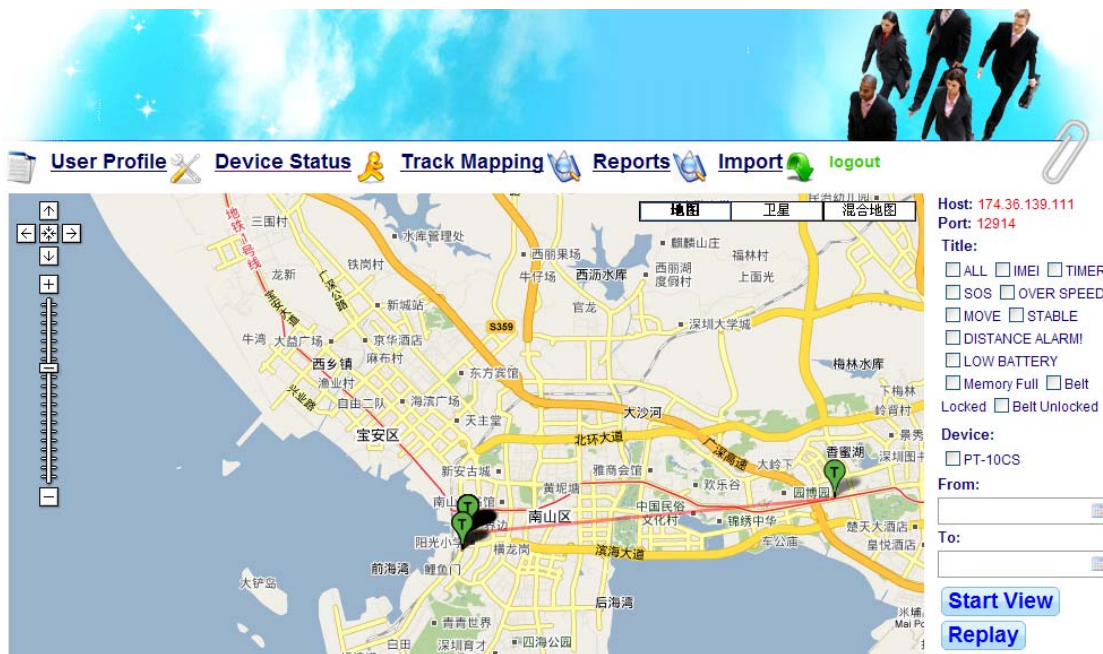

- ✧ “Your cell number”: input your cell phone number, it's for timer & SOS.
- ✧ “APN name”: APN name of the SIM card in the tracker. Refer to you SP.
- ✧ “User name” & “Password”: Some APN doesn't need the User name & Password, so we haven't wrote any thing in this example. Remember it just an example, you must ask your Service Provider (SP) that if your SIM card need the User name & Password to use GPRS.
- ✧ “IP address”: 174.36.139.111
- ✧ “Port” : 12914

After you finished, click “Confirm” button. Wait a few seconds for setting; you will get the successful tips. Then you can disconnect your tracker; put it to balcony or somewhere can find the sky.

E. Start Tracking

Click “Track Mapping”, you will see a page like this:

Detail of the button:

Title:

☐ IMEI ☐ TIMER

☐ SOS ☐ Very SOS

☐ DISTANCE ALARM

☐ OVER SPEED

☐ LOW BATTERY

☐ Memory Full
